NEW PRODUCT ANNOUNCEMENT VTU RESURFACER

**Sandless, Self-Curing Resurfacer
for Tilt-Up and Vertical Concrete Restoration**

Denver, CO - February 2, 2007 - US SPEC recently introduced VTU Resurfacer, a sandless, self-curing surface treatment designed for tilt up, precast or poured in place concrete.

Designed to fill and smooth interior and exterior vertical concrete surfaces, VTU Resurfacer provides a high level of workability, finishing characteristics and a unique self-curing mechanism. VTU Resurfacer is sandless; there is no "gritty" texture, so a smoother finish can be achieved. It will bond tenaciously but is not sticky in application. It is an excellent color match to concrete and provides a longer pot life than similar products on the market.

VTU Resurfacer can be used for resurfacing, repairing, patching or finishing of concrete surfaces. It can also be used as a cementitious rub for defective concrete formwork. VTU Resurfacer can be applied from feather edge to 1" then painted or sealed when visibly dry.

VTU Resurfacer is part of US SPEC's new SLIC (SandLess Innovative Coatings) line of

products. The SLIC product line was launched in 2007 to fulfill increasing contractor requests for sandless products. All products in the SLIC line utilize the technology developed by US SPEC that allows sandless materials to get durable, aesthetically pleasing results while providing a high level of workability and easy finishing.

VTU Resurfacer is available now in 10 lb. bags. For more information, contact US SPEC at 800-397-9903 or visit www.usspec.com.

About US SPEC:

US SPEC is the construction chemical division of US MIX Co. US SPEC Products are engineered professional products designed, formulated and intended for use by the professional contractor in every aspect of concrete construction. Both liquid and powder formulations make up a complete product line for US SPEC Products.
