

LA RAMS STADIUM

US SPEC Products: Slickote, Ezkote Green, MP Grout, Quickset, NA Grout, NA-100, Proprietary Concrete Patch, Proprietary Concrete Fogging Mix

Location: Inglewood, CA

Date of Completion: Summer 2020

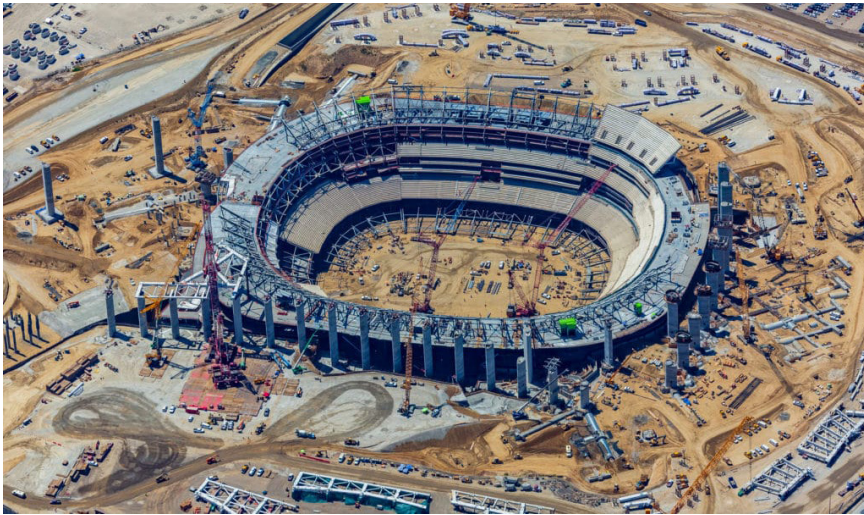

The Los Angeles Rams Stadium and Entertainment District at Hollywood Park is transforming the site of the former Hollywood Park Racetrack to a year round sports and entertainment destination. The entire project covers 298 acres and includes a 70,000 seat stadium (expandable to 100,000 seats) as well as office, retail, hotel and residential spaces. There will be 25 acres of parks, opens space and walkways, family and fine dining and state-of-the-art event, conference and meeting spaces.

A variety of US SPEC products were used on this project. US SPEC MP Grout was chosen because of its proven performance, ease of placement and high strength support. Our form releases (Slickote and Ezkote Green) were chosen as an environmentally safe products that leave a clean surface finish.

NA Grout and NA-100 Grout were selected because they are PTI approved. These post-tension grouts were used in structural columns. This stadium is designed to withstand an 8.0 magnitude earthquake.

US SPEC was also willing to assist the contractor in developing a proprietary patching and fogging mix. This was used on surfaces of pre-cast support towers. US SPEC made test batches to color match mismatched precast tower sections. The patch was then hand placed and the fogging material was applied using a low pressure sprayer.

US SPEC PROJECT PROFILE

PRODUCTS USED:

NA Grout

High Flow, Non-Aggregate, Non-Shrink PT Grout

NA-100

High Flow, Bleed Resistant, Non-Aggregate, Non-Shrink PT Grout

MP Grout

High Flow, High Strength, Non-Shrink, Non-Corrosive Grout

Quickset

Rapid Setting Repair Mortar for Horizontal, Vertical and Overhead applications

Slickote

Premium, Reactive Form Release for Precast and Architectural Concrete

Ezkote Green

Multi-Use, Non-Petroleum, Reactive Form Release
